LDeX CONNECT - DATA CENTRE INTERCONNECTS

**LDeX CONNECT DATA CENTRE INTERCONNECTS SOLUTIONS
CONNECT CROSS DATA CENTRE EQUIPMENT TOGETHER OVER OUR
SECURE, RESILIENT NETWORK**

DATA CENTRE INTERCONNECTS OVERVIEW

Data Centre Interconnects is a resilient and robust fibre based network, operated by LDeX Connect, diversely connecting many of the leading UK Data Centres together. The aim being to give our clients an easy and cost effective option to build their own networks via a high capacity, secure, diverse, direct and low latency infrastructure between Data Centres.

METRO CIRCUITS

If you need to connect two or more UK data centres at speeds of up to 10gbps, our 10gbps ready inter-data centre network can instantly provide you with a resilient metro circuit between locations.

Your metro circuit can be delivered to you as individual VLANs or as a transparent service so that you can configure multiple VLANs over the same metro service.

Lead times are minimal - all we need to do is configure you a port at each location.

WAVELENGTHS & FIBRE

Wavelengths and fibre offer you unrivalled point to point networking capabilities at almost unlimited speeds. Latency is absolutely minimised, your connections are uncontended and the expansion possibilities are endless.

BENEFITS OF LDeX's DATA CENTRE INTERCONNECTS

- ✓ Every customer port is VLAN transparent using IEEE 802.1Q or an MPLS Pseudowire
- ✓ Scalable port options from 10 Mbps to 10 Gbps
- ✓ Per port Usage monitoring
- ✓ Copper, Multimode and Single mode fibre options available in most locations
- ✓ Each DC POP location has out of band access
- ✓ Rapid installation
- ✓ 24 x 7 technical support
- ✓ Cisco powered network
- ✓ Diverse connectivity between sites
- ✓ Ultra low latency routes via Internet
- ✓ Exchange peering points
- ✓ Managed and monitored via 24 x 7 power protected NOC
