LDeX CONNECT - MPLS

An LDeX CONNECT MPLS VPN COMPRISES OF A SECURE AND RESILIENT PRIVATE NETWORK USING A NUMBER OF ACCESS INTERFACES INCLUDING ADSL, BONDED ADSL, SDSL, ETHERNET AND FIXED LINE CIRCUITS

MPLS ADVANTAGE

With our secure MPLS network we can build you a private MPLS VPN network enabling any device on the internet, anywhere in the world, to be connected securely into your own virtual private network. This enables businesses to share network resources and instantly improve workflow and digital collaboration no matter where the resources are physically located.

SCALABLE

MPLS is highly scalable and less complex than other distributed network technologies, businesses gain more flexibility, less overhead and improved control over network costs. MPLS makes it easy to reroute traffic and prioritise on the fly, or add new locations to the network whenever you need. Quality of Service is available within the MPLS network thus giving network users guaranteed bandwidth and guaranteed service. LDeX's MPLS VPNs are deployed across our wholly owned infrastructure.

RESILIENT

Our MPLS core is designed with resilience in mind. If a network outage occurs on a path within the core traffic is rerouted to an alternate link within milliseconds which will not be noticed by the end users. Resilience can also be built in to the access layer using DSL backup or secondary links into the core.

BENEFITS OF LDeX's MPLS VPN

- ✓ MPLS available on multiple interfaces types from cost effective ADSL up to multi Gigabit
- ✓ UK wide network coverage
- ✓ Multiple classes of QOS giving guaranteed bandwidth and delivery
- ✓ Highly scalable network
- ✓ Unified network
- ✓ Highly available with intelligent failover
- ✓ Full bandwidth monitoring
- ✓ Fully managed service
- ✓ Cisco powered
- ✓ DNS management included
- ✓ Add new locations quickly
- ✓ Enhanced security
- ✓ Disaster recovery
- ✓ Streamline network implementation and management
- ✓ Managed from 24 x 7 power protected NOC
